Aseptic Packaging

170 years of success, big challenges and exciting ventures: a growth in which Goglio has been identified as a leading character throughout the history of packaging.

In the early 80s Goglio started pioneering Industrial Aseptic Packaging, and since then has been committed to enhancing the benefits it provides to the food industry

The trademark Fres-co Aseptic System® is at the heart of Goglio's offering: a complete packaging solution combining flexible laminates, packaging equipment, plastic accessories and service for top product preservation.

At Goglio we pursue continuous improvement, implementing updated management techniques and respecting the environment. Contributing towards this objective is the vertical integration of the production process, including film extrusion, laminating, injection molding of spouts and fitments, bag and pouch converting.

Progressively more favorable ratios of packaging material used per unit product, positively impact the environmental and the economic advantage of aseptic packaging over more conventional ones, delivering the best solutions to maximize your benefits.

Goglio aseptic bag making facilities are in clean room environment and certified according to the most advanced quality standards.

Bag making equipment is self manufactured by Goglio Machine Division in Italy.

Your worldwide partner
for product and services

We pack responsibly

Offering unique experiences of innovation and service, together with sustainability and social responsibility.
