Bangkok	6.70%	Colombia	0.90%
Turkey	5.50%	Ethiopia	0.86%
China	4.60%	Srilanka	0.40%
Pakistan	2.50%	Other	2.30%
Iran	1.03%		

Quality Issues with Spices

STONES

Some tiny stones which are not washed away at the initial stage can cause a major issue with the product quality.

STALK OR LEAVES

Impurities can be in the form of stalk or leaves which may left over in the milling process. This will be surly rejected by the quality department.

UNEVEN PARTICLE SIZE

Due to low end vibro sifters, you may get uneven particle size which may harm the final quality of your product.

METALS

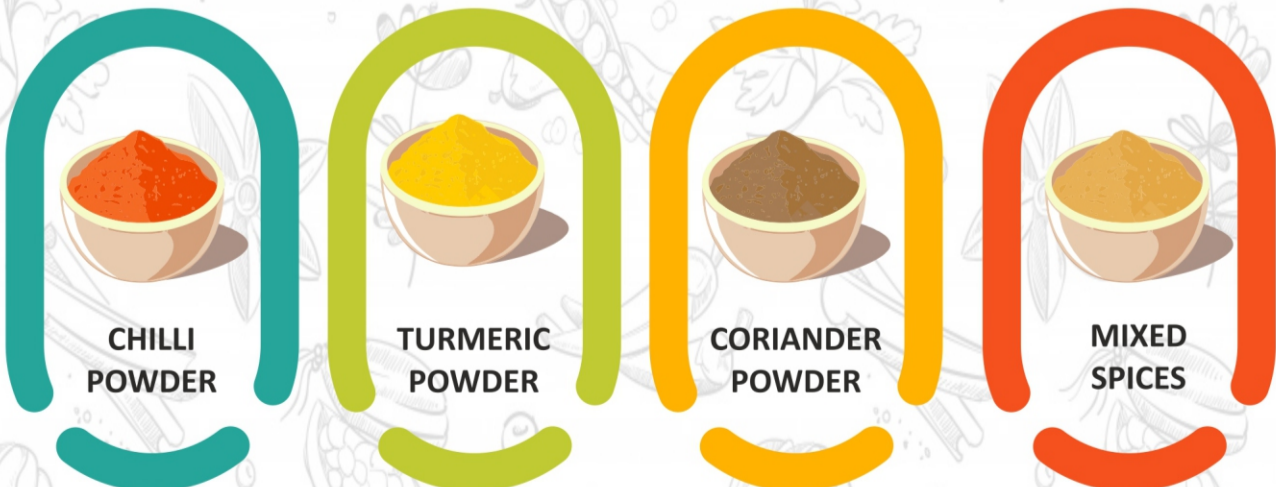

Metal impurities are highly expected because the product is processed through machines and human intervention cannot be avoided in some industries.

SIEVING IS THE SOLUTION FOR IMPURITY ISSUES

VIBRO SIFTER CAN SIEVE DIFFERENT TYPES OF SPICES
